

Python Tsunami

An Introduction to Python

Who are we?

SUND Data Lab

SUND Data Lab - Center for Health Data Science (HeaDS)

The mission of the Data Lab is to strengthen health data science within the Faculty:

- Visible hub for Health Data Science
- Data science support for researchers at SUND
- Courses, workshops and training environments to improve data science skills

About this course

Day 1		Day 2		Day 3	
08:30-08:45	Morning Coffee	08:30-08:45	Morning Coffee	08:30-08:45	Morning Coffee
08:45-09:15	Intro to Python & Colab	08:45-10:15	Pandas: Series, Dataframes, Indexing	08:45-09:50	Recap quiz + Q&A
09:15-09:50	Variables & Data Types				
09:50-10:00	Break	10:15-10:30	Break	09:50-10:00	Break
10:00-10:50	Iterables I: Lists	10:30-12:00	Pandas: Data selection & Summary	10:00-12:00	Visualization
10:50-11:00	Break				
11:00-12:00	Iterables II: Sets, Dicts & Tuples				
12:00-13:00	Lunch	12:00-13:00	Lunch	12:00-13:00	Lunch
13:00-14:15	Booleans, Operators & Conditions	13:00-14:00	Pandas: Modifying Data	13:00-13:30	Local Installations
14:15-14:30	Break	14:00-14:15	Break	13:30-16:00	Dataset Exercise
14:30-16:00	Loops	14:15-15:30	Pandas: Groupby, Sort & Impute		
		15:30-16:00	Pandas Q&A		
16:00	See you tomorrow!	16:00	See you tomorrow!	16:00	Course Finished!

Python

Why Python?

Python is a great programming language for both beginners and advanced programmers:

- Easy to grasp, close to natural language
- Many learning resources available
- Large community
- Libraries
- Simple or very advanced analysis

Required Programming Languages

Data Scientists 2025

Where to get help

Online communities such as **stackoverflow** are an important tool in programming.

[https://stackoverflow.com > questions > 28256761 > select-pandas-rows-by-excluding-index-num...](https://stackoverflow.com/questions/28256761/select-pandas-rows-by-excluding-index-num...)

select pandas rows by excluding index number - Stack Overflow

I'm looking to slice a **Pandas** dataframe by using index numbers. I have a list/core index with the index numbers that I do NOT need, shown below **pandas**. Stack Overflow ... Use a list of values to **select** rows from a **Pandas** dataframe. 2015. Delete a column from a **Pandas** DataFrame. 1290. How to drop rows of **Pandas** DataFrame whose value in a certain ...

Or ask **ChatGPT**. But remember: “With great power comes great responsibility!”

Python Environments

Jupyter notebook

Jupyter Notebook is an **open-source application** to create and share documents that contain code, visualizations and text (markdown).

- Browser-based development environment for creating, running and sharing Python code
- Combine code with text and output
- Runs from your **local installation**. I.e., you need Python and the libraries you want to use installed on your computer

Google Colab is a Jupyter Notebook hosted on Google's servers, not your own machine. It still runs in your browser.

- Tool to write, execute and share Python code through the browser
- Requires no setup to use and provides free access to computing resources on Google's servers including GPUs
- Connected to a Google account and data and notebooks can be accessed through Google Drive.

We'll use Colab during the course.

Python Libraries

Python has many libraries, also called packages, that other programmers have developed. Find and **use** them!

Well-maintained libraries generally are:

- Tested
- Optimized
- Documented

There is no need to reinvent the wheel. During this course we will use:

- Pandas (all the data analysis!)
- Math (basic math)
- Plotly express (visualization)

Running Python from a local installation requires you to have libraries **downloaded & installed** before you can use them.

On Google Colab you can generally just import, they are already installed.

- Import the math library:

```
import math
```

- Now I can use functions from that library, i.e. calculating the logarithm or square root:

```
math.log(3)
```

```
math.sqrt(4)
```

Short Introduction

Take the next 5 mins to introduce yourself at your table:

- Name
- Position/Unit
- What you do (very briefly!)
- Why would you like to learn Python?
